I. INTRODUCTION

In keeping with our vision to be a modernized customs and tax administration delivering excellence in revenue collection, border protection, and trade facilitation, the Customs and Tax administration is pleased to share with all the stakeholders in the manifest process the ASYCUDA World Manifest User's Guide. The manual is intended to guide the system users in preparing and submitting the electronic cargo declaration.

The Customs Act Subchapter III Section 238 and supporting regulations require the master of every vessel or the pilot of every aircraft to deliver and submit a report of the manifest and all the bills of lading and airway bills for cargo to be discharged at a particular port.

The cargo manifest submission is the point of entry for all the customs clearance processes in ASYCUDAWorld. The cargo manifest is used by the Customs and Tax Administration to ensure that all cargoes imported through our seaports are correctly recorded and accounted for and are received in accordance with FSM customs and tax laws. It also gives advance notice on imported cargo allowing the Customs and Tax Administration to plan examination priorities, risk assessment and facilitates faster cargo clearance.

WELCOME TO ASYCUDA WORLD!

II. Definitions

1. The manifest

It is a transport document containing all the goods transported by a means of transport during a particular journey. The ASYCUDA World manifest is composed of two parts: a general segment containing the data related to the whole cargo transport, and one or more transport documents (Waybills).

2. The waybill

Different kinds of waybill are used in ASYCUDAWorld.

- **House bill:** represents a consignment. Goods relating to a house bill can be declared directly by a customs detailed declaration.
- **Master waybill:** Refers to the consolidation for transport purpose of several house bills. It must be deconsolidated into house bills before a declaration can be lodged against any of the bills.
- **1st level waybill:** This is a bill directly linked to the manifest. It can be a master or house waybill.
- **2nd level waybill / Sub-bill:** It is always a house bill resulting from a deconsolidation. It is not directly attached to Manifest but to a master waybill.

3. E-Document status

Documents in ASYCUDAWorld have a life cycle. Their status changes as we perform operations on them. Some operations change the document's status, while others do not. When the status of a document changes, the operations available on the document will change accordingly.

III. GENERAL INFORMATION

1. How to access the module

The access to ASYCUDA World is granted through an application process. All users must submit the user application and registration form to the Customs and Tax Administration to get access.

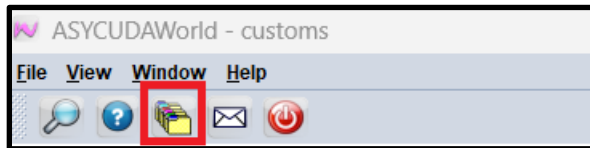

The Customs and Tax Administration will issue a login name and initial password. The appropriate access rights will be granted based on the profile of the applicant. To access the manifest management module, the user must have the relevant rights.

2. Open the main menu

When the user is logged into ASYCUDAWorld, the main menu is accessed by clicking on the

button.

Then the main menu opens. The available modules depend on the access level granted to the user's profile.

3. Manifest general segment fields

Here is a list of the general segment data fields and the respective description.

DATA FIELD	DESCRIPTION
Office of departure/arrival	Code of the Customs office of departure or arrival
GENERAL DATA	
Voyage number	Aircraft flight number or vessel voyage number. This is a unique identification of the current journey of the mean of transport
Date of departure	Date when the means of transport starts the journey
ATA (Actual time of arrival) - Date of arrival	Date when the means of transport arrives at the port
ATA (Actual time of arrival) - Time of arrival	Time when the means of transport arrives at the port.
Date of departure from FSM	Date when the means of transport departs from the port
Last discharge	Date when all the goods of the manifest have been unloaded from the mean of transport
Manifest number and date of registration	These fields will be automatically completed by the system upon registration of the manifest
Place of loading	The place where the vessel or aircraft begins its voyage
Place of unloading	Place where the goods will be unloaded from the means of transport
Last port	The port where the vessel is coming from
Next port	The port where the vessel is heading
TRANSPORT DATA	
Carrier	Code, name, and address of the party undertaking the transport of the goods
Shipping Agent	Code of the Shipping Agent in charge of the ship management during the stay in port
Mode	Code identifying the mode of transport
Nationality	Country code where the mean of transport is registered
Name of vessel / aircraft	Ship name, aircraft name
Place	Location in port where the vessel is berthed or moored
Registration	The registration number of the means of transport
Date	The registration date of the means of transport
Master (Pilot / Captain)	Name of the captain, the pilot
Totals	Summary of the quantitative data regarding the cargo total number of waybills, packages, containers and total gross weight contained in the manifest
TONNAGE	
Gross and net tonnage	Tonnage of the ship - Information data not applicable for FSM

4. Waybill fields

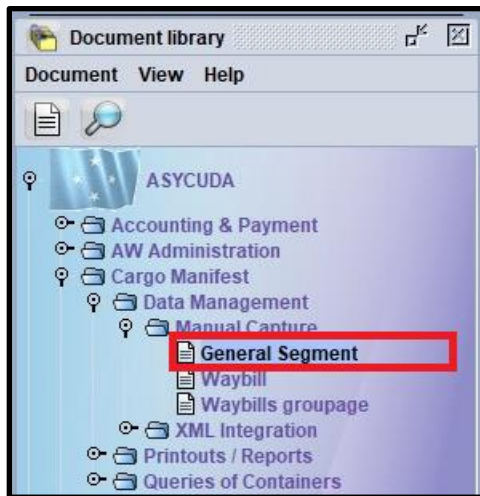

Here is a list of the general segment data fields and the respective description.

DATA FIELD	DESCRIPTION
GENERAL DATA	
Waybill reference number	Identifier of the transport document
Waybill type	Type of transport document (e.g., « AWB » for Air waybill)
Previous document	Reference of the master waybill in case of deconsolidation.
Nature	Code nature of the document: export, import, transit, transshipment.
UCR	Data not applicable for FSM.
Waybill line	Sequential number for each waybill.
EXPORTER / IMPORTER	
Exporter/Shipper	Code, name, and address of the exporter
Notify	Code, name, and address of the person who requires notification upon arrival of the goods
Consignee	Code, name, and address of the importer
GOODS	
Total containers	Total number of containers for this transport document
Packages code	Code and description of the kind of packages (cartons, boxes...)
Status	Status code of the waybill (Master, Sub-bill...).
Number of degrouped waybills	Number of deconsolidated sub-bills resulting from the deconsolidation of a master document. This field is directly managed by the system.
Marks & nb	Shipping marks
Manifested packages	Number of packages as indicated on the waybill.
Remaining packages	This is handled by the system when there is writing off operations are performed.
Manifested gross weight	Gross weight indicated on the waybill.
Remaining gross weight	This is handled by the system when there is writing off operations are performed.
Volume (MC)	Volume of the goods in cubic meters
Description of goods	Commercial description of the goods from the waybill data
Location of goods	Code of the place where the goods are located
VALUES AND SEALS DETAILS	
P/C Indicator	The value « P » means that the freight has been prepaid, and the value « C » means that the freight is to be collected
Freight value and currency	The amount of freight and the currency code
Value for Customs	The value declared for customs
Value for transport	The value declared for transport
Value for insurance	The value declared for insurance
Seals number	Number of seals affixed
Marks	Marks or references number of seals
Party	Code of the body having affixed the seals (Customs, terminal operator,..)
Information	Additional Information as required

IV. MANIFEST GENERAL SEGMENT

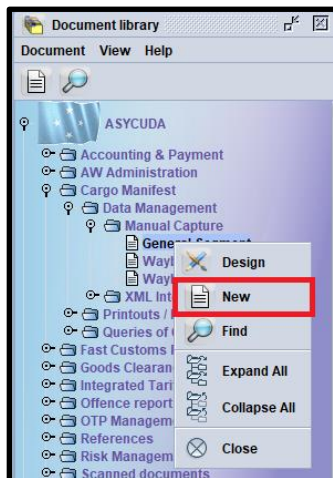

1. Access the manifest general segment

The manifest creation starts with the General Segment. Access the General Segment by navigating the Document Library using the Path: ASYCUDA -> Cargo Manifest -> Data Management -> Manual Capture -> General Segment.

2. Create new general segment

To create a new general segment, right click on the “General Segment” e-document and select New, as illustrated below

Then a general segment page appears:

General Segment - New [n/a]

Manifest Bol Scan Documents CO-Loaders

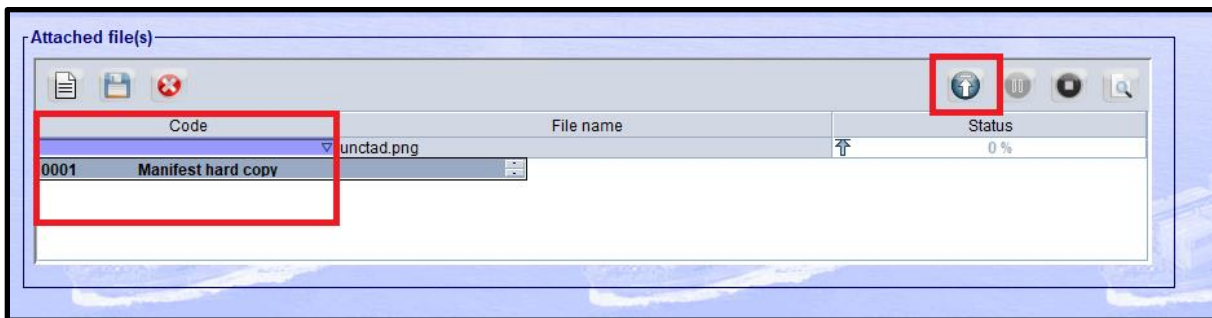

The carrier's main representative will fill out the form above. Some fields are mandatory. They will appear in red if they are not correctly filled in. To check mandatory information, click the  icon. Use the [Manifest general segment fields](#) to capture the necessary data.

3. Attach scanned documents

When submitting a manifest general segment, the user can attach the relevant supporting documents as recommended by the Customs and Tax Administration. He will go to the “Scan document” tab and then select the  icon.

Then the user will get a screen allowing him to select the file to attach from the computer. When the file is selected, the user will choose the type of document attached and click on the  button to upload the file.

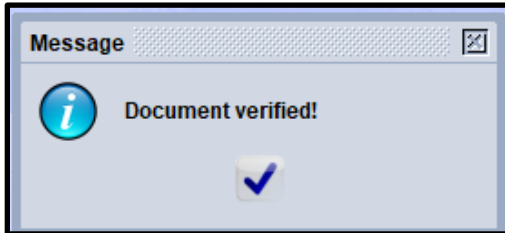

The user can add as many documents as are required.

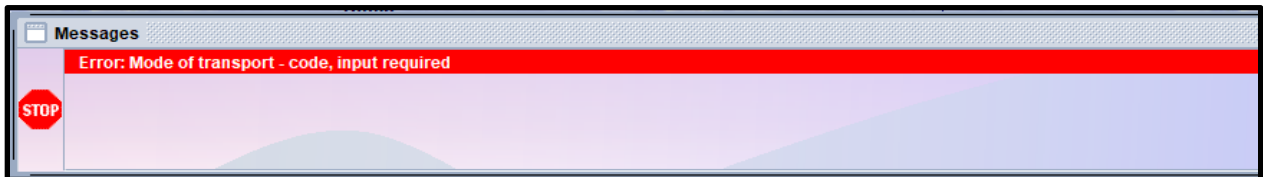

4. Verify a manifest general segment

When the user has filled out all the required data, he can check if all the data has been correctly inserted by clicking the  icon.

If everything is entered correctly, the next confirmation message will be displayed:

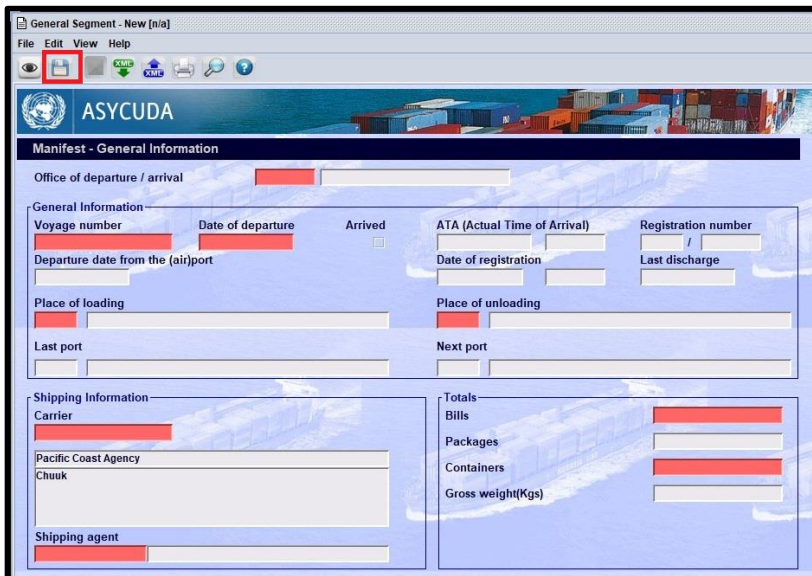

Otherwise, an error message will be displayed.

5. Store a manifest general segment

When all data has been entered into the system, the user can store the manifest general segment by clicking on the  icon. The user can reopen the manifest at any time and continue the data entry later.

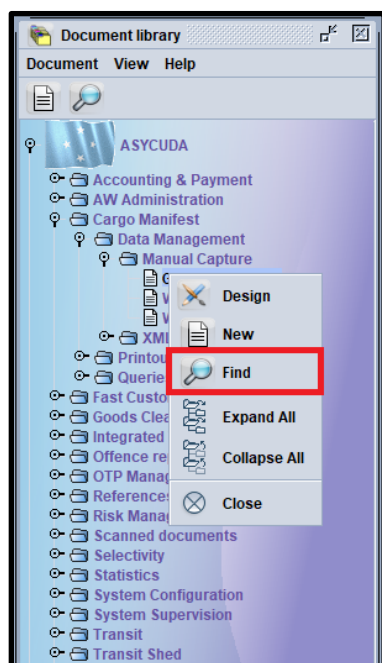

A screenshot of the 'General Segment - New' form in the ASYCUDA system. The form is titled 'General Segment - New [nia]' and has a menu bar with 'File', 'Edit', 'View', and 'Help'. Below the menu bar is a toolbar with various icons, including a save icon (floppy disk) which is highlighted with a red box. The form itself is divided into several sections: 'Manifest - General Information' with fields for 'Office of departure / arrival', 'Voyage number', 'Date of departure', 'Arrived' (checkbox), 'ATA (Actual Time of Arrival)', 'Registration number', 'Departure date from the (air)port', 'Date of registration', and 'Last discharge'; 'Shipping Information' with fields for 'Carrier', 'Pacific Coast Agency', 'Chuuk', and 'Shipping agent'; and 'Totals' with fields for 'Bills', 'Packages', 'Containers', and 'Gross weight(Kgs)'. The form has a blue background with a ship and containers illustration.

When the store operation succeeds, the confirmation message below is displayed:

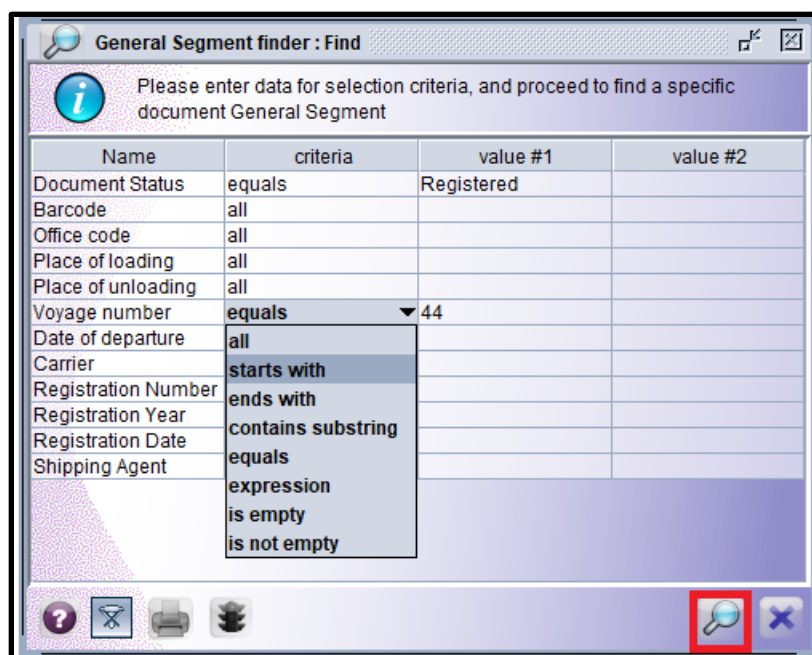

6. Find a manifest

A stored or registered manifest can be found using the finder. This is done by right-clicking the manifest general segment and selecting the find option as follows:

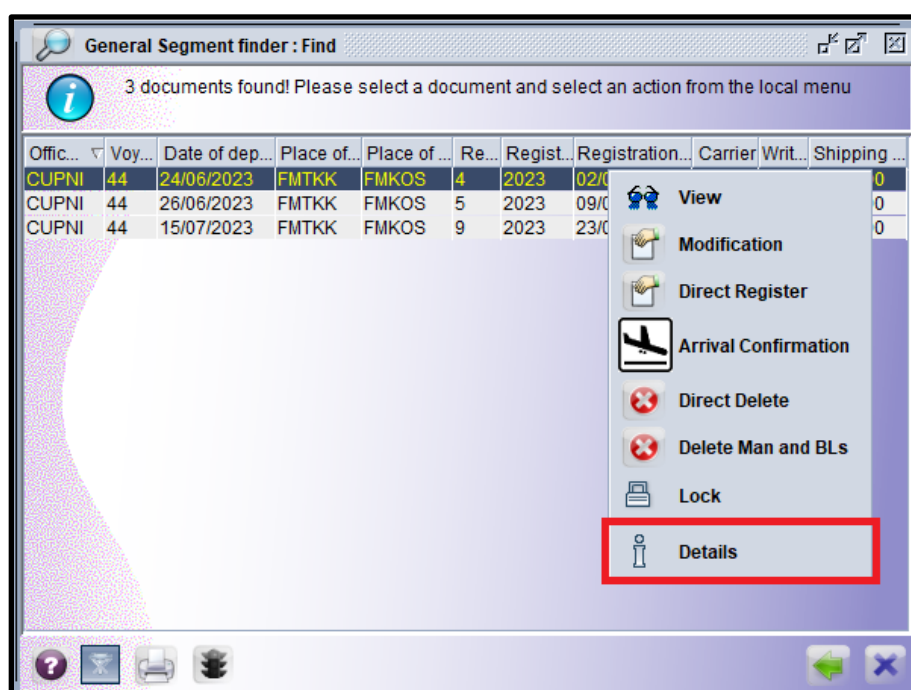

A window with search criteria will be opened and the user will use the appropriate criteria to find the needed information. Multiple search criteria can be combined to get the right line(s).

Then click on the  icon.

A list of all records matching the search criteria is displayed:

Details on the operations performed on the records can be viewed by clicking on the “Details” operation. The following screen will appear:

8. Register a manifest general segment

Registering a manifest is equivalent to the submitting the manifest to customs administration. This operation will be performed by the shipping agent when all information relating to the manifest and the corresponding waybill has been captured into the system. A manifest general segment can be registered in two ways:

1st From the finder

Find the manifest using the finder and then right-click on the desired line. The screen below shows up, and then select the “Direct Register” operation.

2nd From an opened manifest general segment

The registration of a manifest can be done by clicking on the  icon when the general segment is opened, as shown on the screen below.

General Segment - Modification [CUPNI]

9. Export / Import XML file

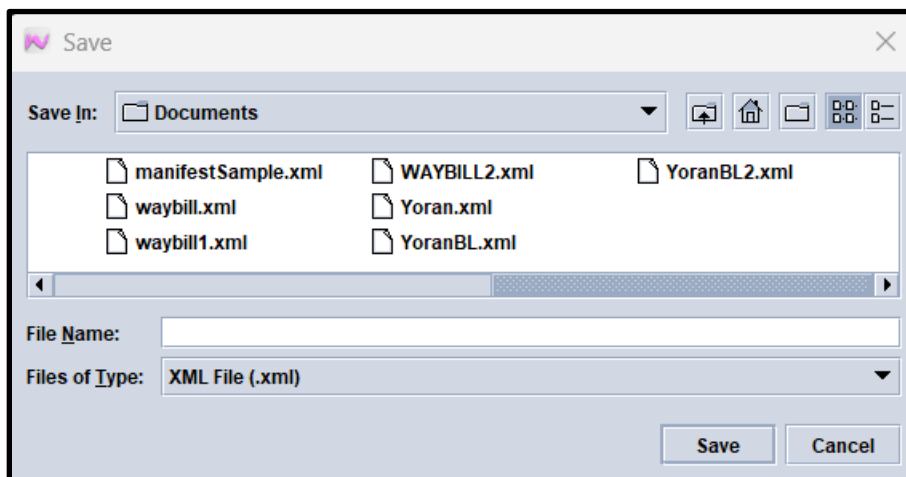

ASYCUDAWorld allows you to store a manifest's general segment in an XML file. This file can be used later as a template for further manifests to be created.

Open a general segment in view or modification mode as per the screen below.

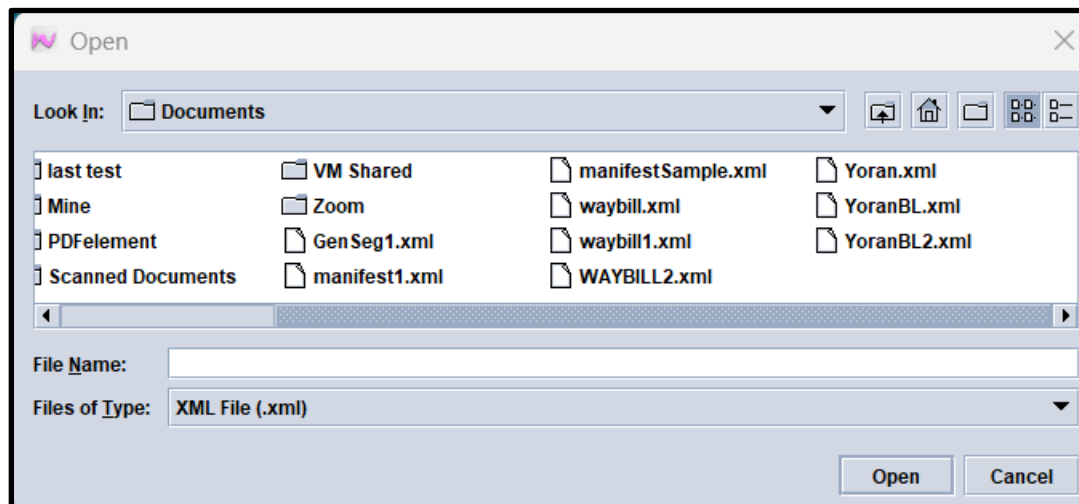

To generate the XML file, the user will click on the  icon and save the file on the computer.

The below window opens to save the file. Then choose the folder where the XML file will be stored and click on “Save”.

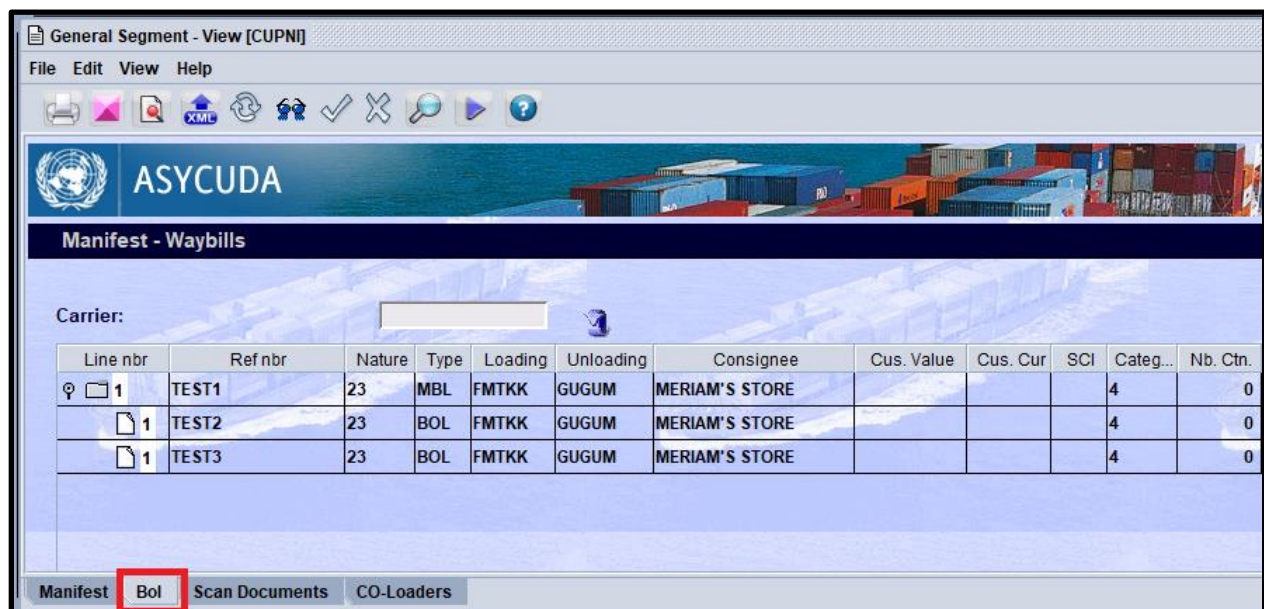

The generated file can be uploaded to the system by clicking on the  icon. The window below opens. Then pick the XML file to use.

The data in the XML file will be automatically loaded into the system.

10. List waybills on a manifest

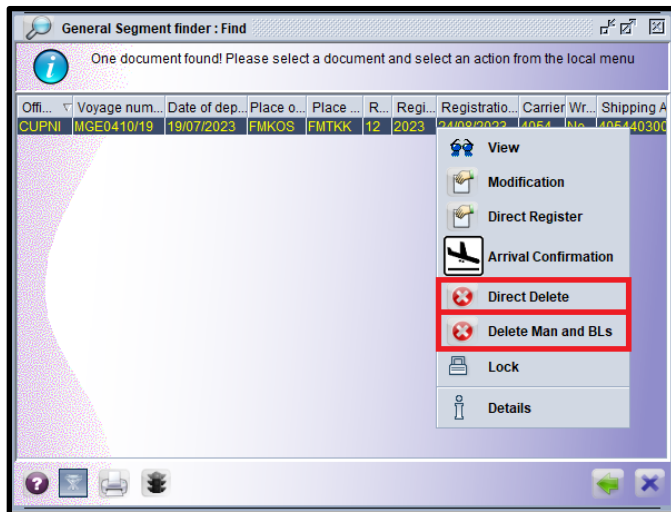

To view the list of waybills of a manifest, you open the manifest in view or modification mode. Then you go to the “Bol” tab. A list of all the waybills for the manifest is displayed as per the screen below:

11. Delete a manifest general segment

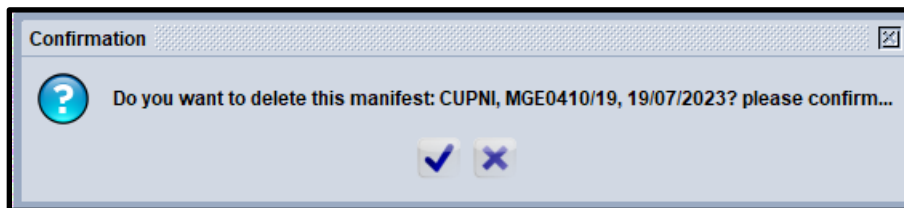

As long as the manifest is still a draft (Status = Stored) and no associated waybill has yet been validated, it can be deleted.

Right-click on the selected general segment and select the “Direct Delete” operation as shown on the screen below:

You can choose the “Direct Delete” option to delete the general segment and keep the corresponding waybills or you can choose “Delete Man and BLs” to delete the general segment and all the corresponding waybills.

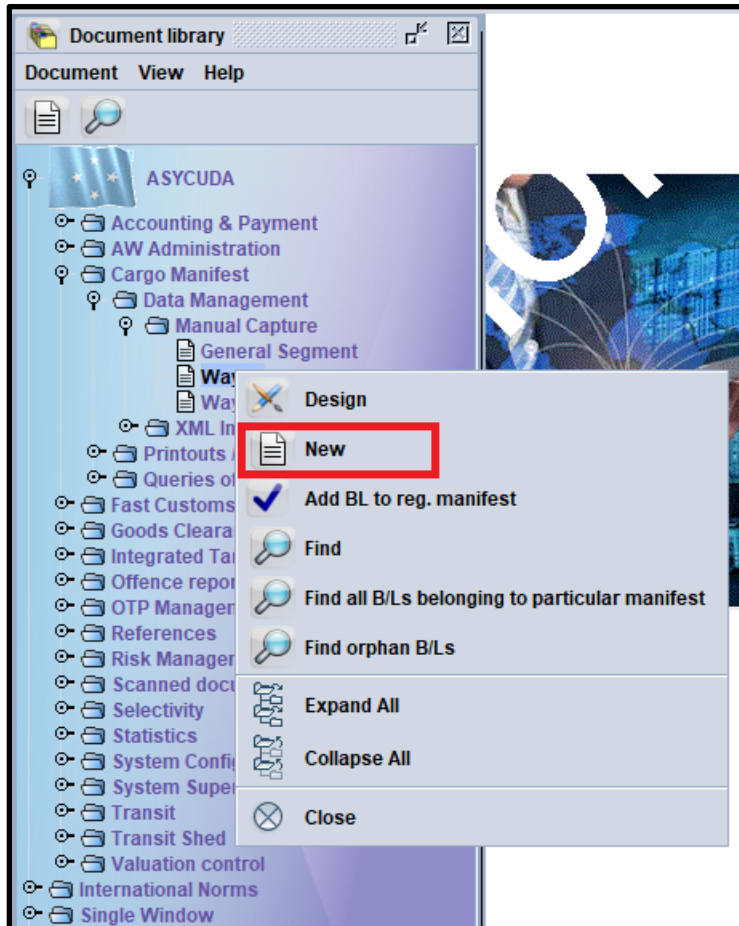

Then a confirmation page is displayed, and then choose  icon to confirm the deletion.

V. WAYBILLS

1. Capture waybill information

When the general segment is already lodged in ASYCUDAWorld, the user can start creating the waybills. To create a new waybill, right-click at the General Segment and select the “New” operation as illustrated below:

The waybill form will open:

Waybill - New [n/a]

MATU2152944	10	20FT	F	329921					

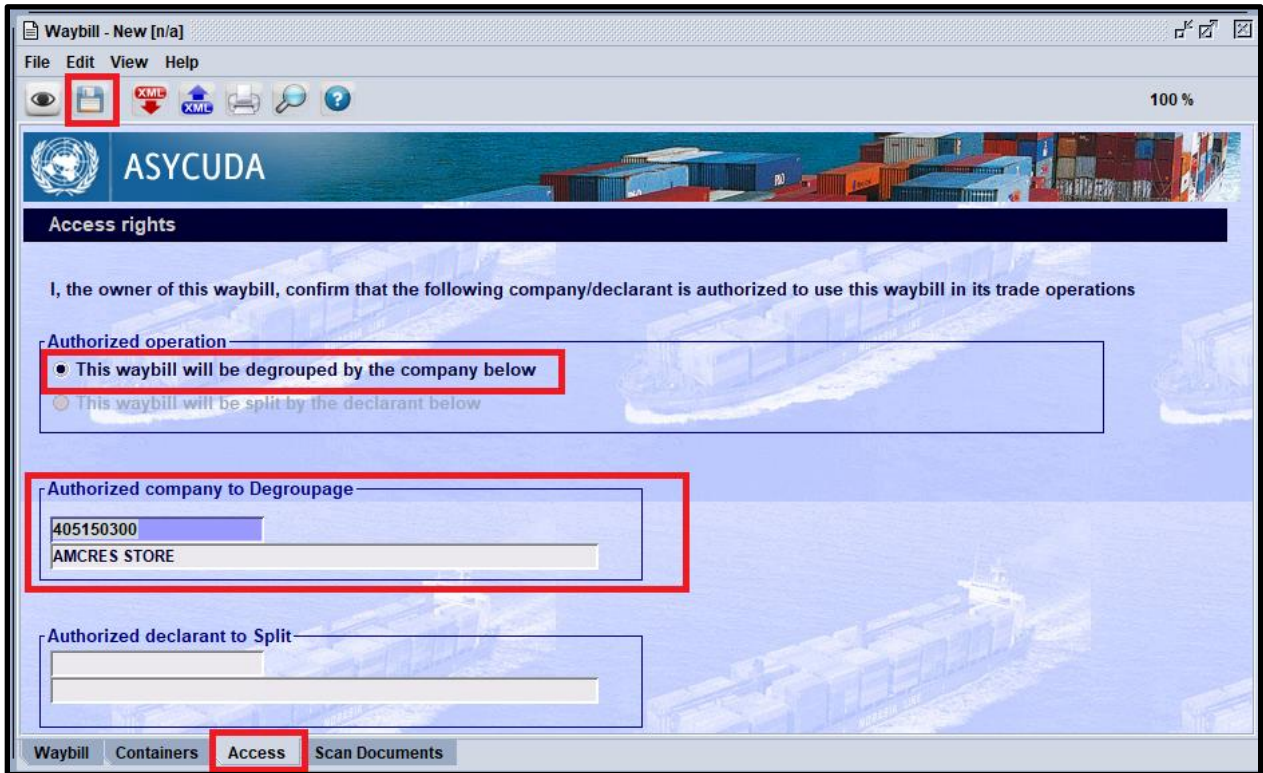

3. Grant waybill access for degroupage

The degroupage (deconsolidation) operation is performed on the master waybills. To authorize a freight forwarder to do degroupage, go to the “access” tab and tick the

☒ This waybill will be degrouped by the company below

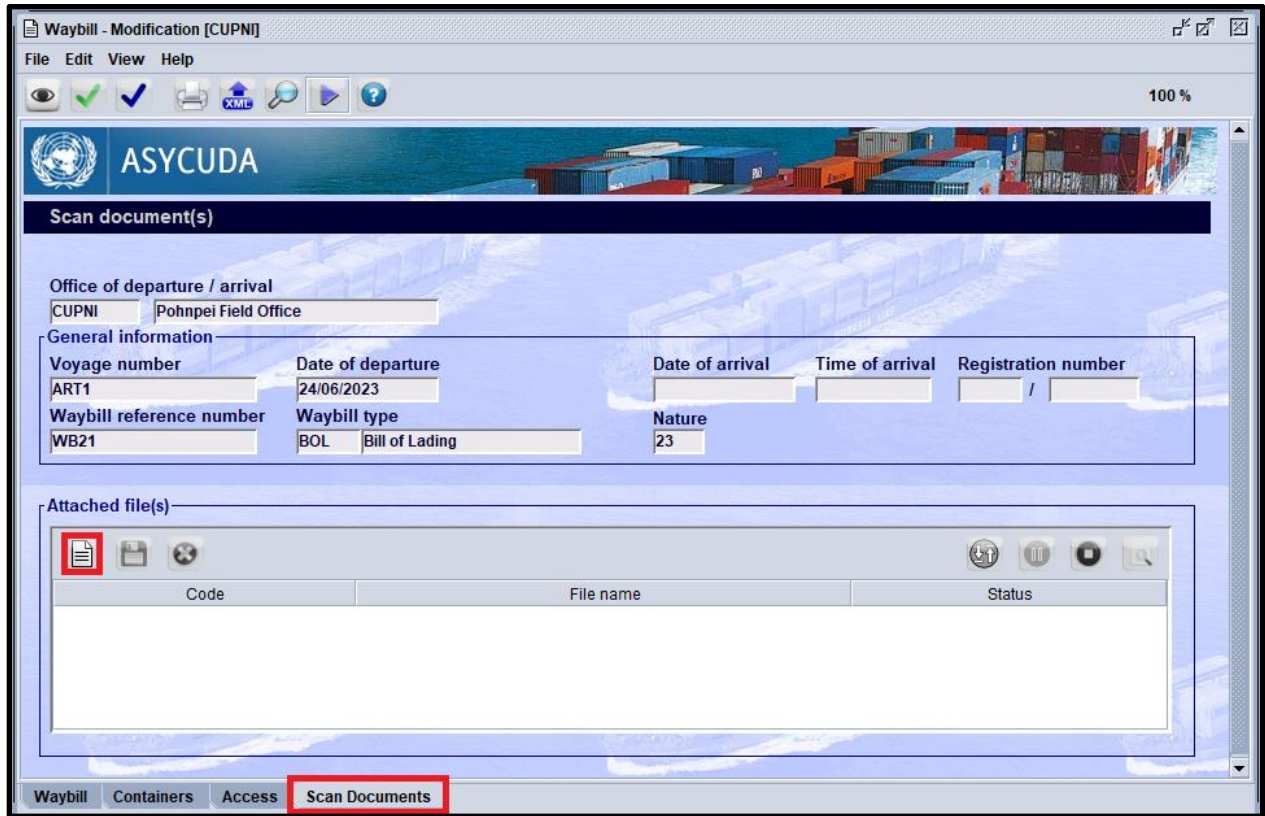

option, then provide the business ID of the

freight forwarder and finally click on the  icon to save the changes.

4. Scan a document

When submitting a waybill, the user can attach the relevant supporting documents as recommended by the Customs and Tax Administration. He will go to the “Scan document” tab and then select the  icon.

Waybill - Modification [CUPNI]

Then the user will get a screen to select the file to attach from the computer. When the file is selected, the user will choose the type of document attached and click on the  Button to upload the file.

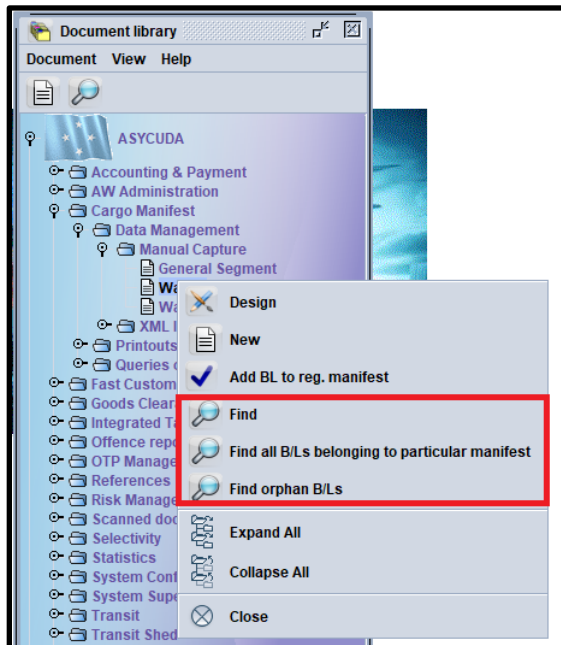

Attached file(s)

Code	File name	Status
0001	Manifest hard copy	0 %

The user can add as many documents as are required.

5. Find waybills

A waybill can be found using the finder. This is done by right-clicking the “Waybill” e-document and selecting the “find” option as follows:

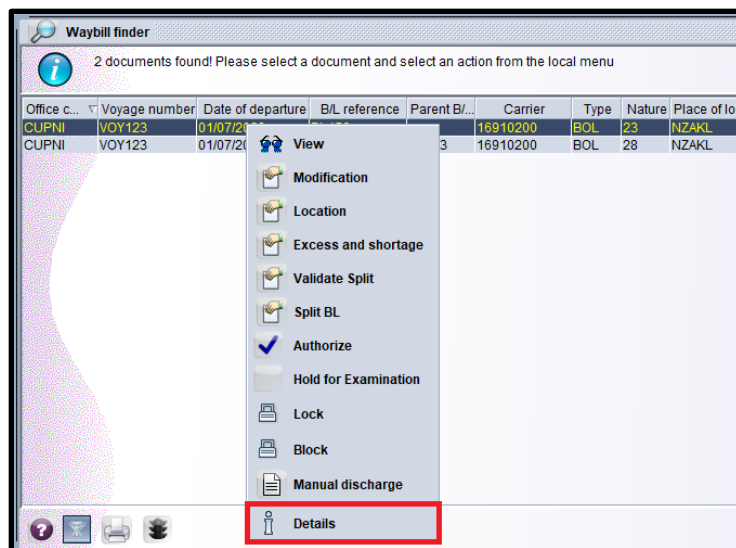

A window with search criteria will be opened and the user will use the appropriate criteria to find the needed information. Multiple search criteria can be combined to get the right line(s).

The 'Waybill finder' window contains a table for search criteria. The table has four columns: Name, criteria, value #1, and value #2. The 'B/L reference' row is highlighted, showing 'contains substring' in the criteria column and 'BL45' in the value #1 column.

Name	criteria	value #1	value #2
Document Status	all		
Barcode	all		
Office code	all		
Voyage number	all		
Date of departure	all		
B/L reference	contains substring	BL45	
Parent B/L reference	all		
Carrier	all

Then click on the  icon.

The list of all records matching the search criteria will be displayed:

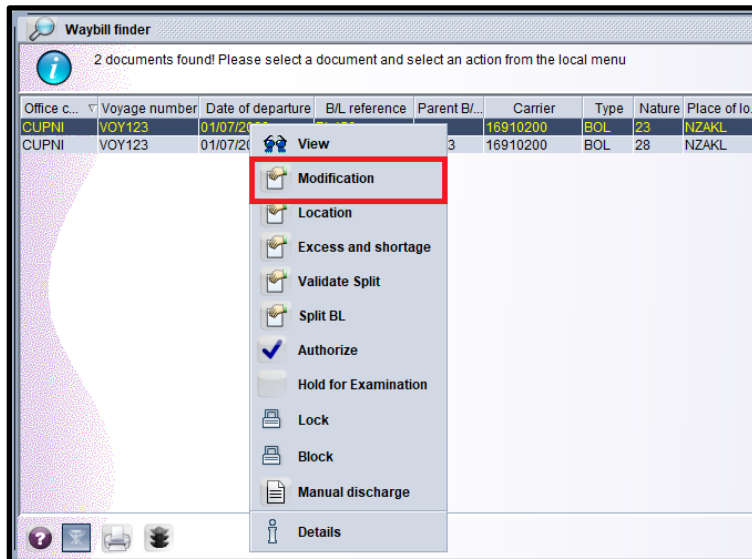

Details on the operations performed on the records can be viewed by clicking on “Details” operation.

The next screen will be displayed:

6. Amending a stored waybill

To modify a waybill, right-click on the waybill from the finder results and choose “Modification option”.

The screen below will be displayed and when all the modifications are done, the user will click on

the  icon to save the changes.

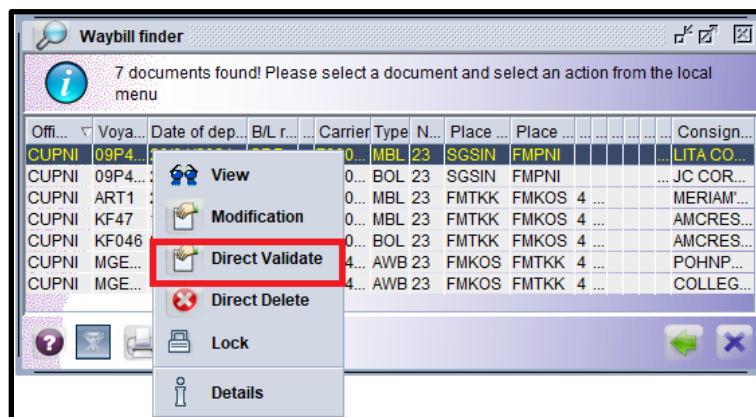

The screenshot shows the 'Waybill - Modification [CUPNI]' form. The form is titled 'Manifest - Waybill' and contains various fields for editing waybill information. The 'Office of departure / arrival' is set to 'CUPNI Pohnpei Field Office'. The 'General Information' section includes fields for Voyage number (ART1), Date of departure (24/06/2023), Arrived (checkbox), ATA (Actual Time of Arrival), Registration number, Waybill reference number (WB21), Waybill type (BOL Bill of Lading), Previous document, ETA (Estimated Time of Arrival), Last port (FMTKK Chuuk), Next port (FMKOS Kosrae), Carrier (7980300), PT&S (Pohnpei), Shipping agent (7980300 PONAPE TRANSFER & STORAGE INC.), and Exporter/Shipper. The form also has a 'Transport' section with tabs for Waybill, Containers, Access, and Scan Documents. A toolbar at the top includes icons for view, save (highlighted with a red box), print, XML, search, and help.

The confirmation message below will be displayed.

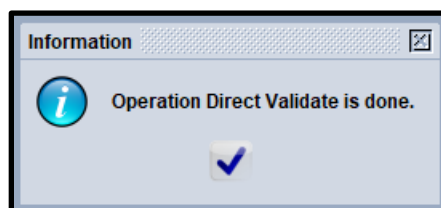

7. Validate a waybill

Right-click on the waybill to validate using a finder. Then select the “Direct Validate” option.

A confirmation message will be displayed.

8. De-grouping a master waybill

The degroupage of a waybill is the operation of creating house bills (also called 2nd-level waybills) related to a master waybill to allow the waybills to be cleared separately. The importer cannot submit a declaration using master waybills.

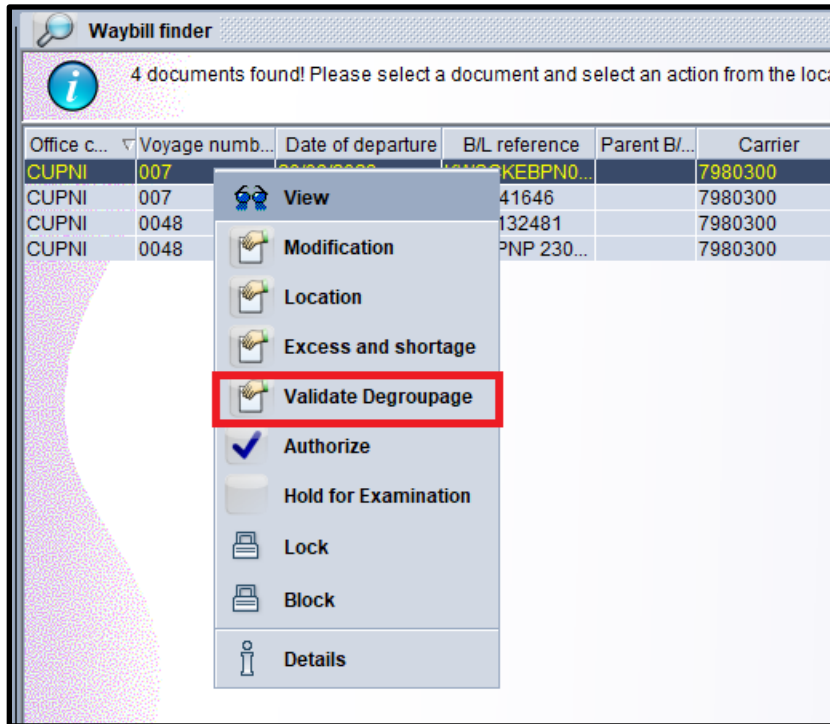

The degroupage is done by creating a new house waybill. The difference between the master waybill and the child waybill is the previous document field, which contains the reference to the master waybill.

The screenshot shows the 'Waybill - View [CUPNI]' window with a menu bar (File, Edit, View, Help) and a toolbar. The main header features the ASYCUDA logo and the title 'Manifest - Waybill'. The form is divided into sections: 'Office of departure / arrival' with fields for 'CUPNI' and 'Pohnpei Field Office'; 'General Information' with fields for 'Voyage number' (44), 'Date of departure' (15/07/2023), 'Arrived' (checkbox), 'Waybill reference number' (MATS2219854), 'Waybill type' (BOL, Bill of Lading), 'Previous document' (GUM-041413, highlighted with a red box), 'ETA (Estimated Time of Arrival)', and 'Last port' (FMTKK, Chuuk).

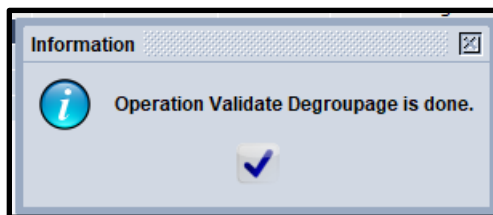

All other steps to create the house waybill are the same as the 1st-level waybills.

9. Validate de-groupage

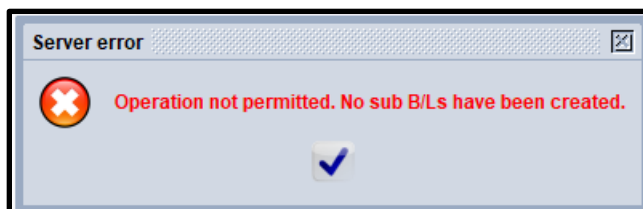

This operation allows to validate all the house waybills linked to a master waybill. Right-click on the master waybill to deconsolidate and choose the “Validate Degroupage” option.

If the operation succeeds, a confirmation message is displayed.

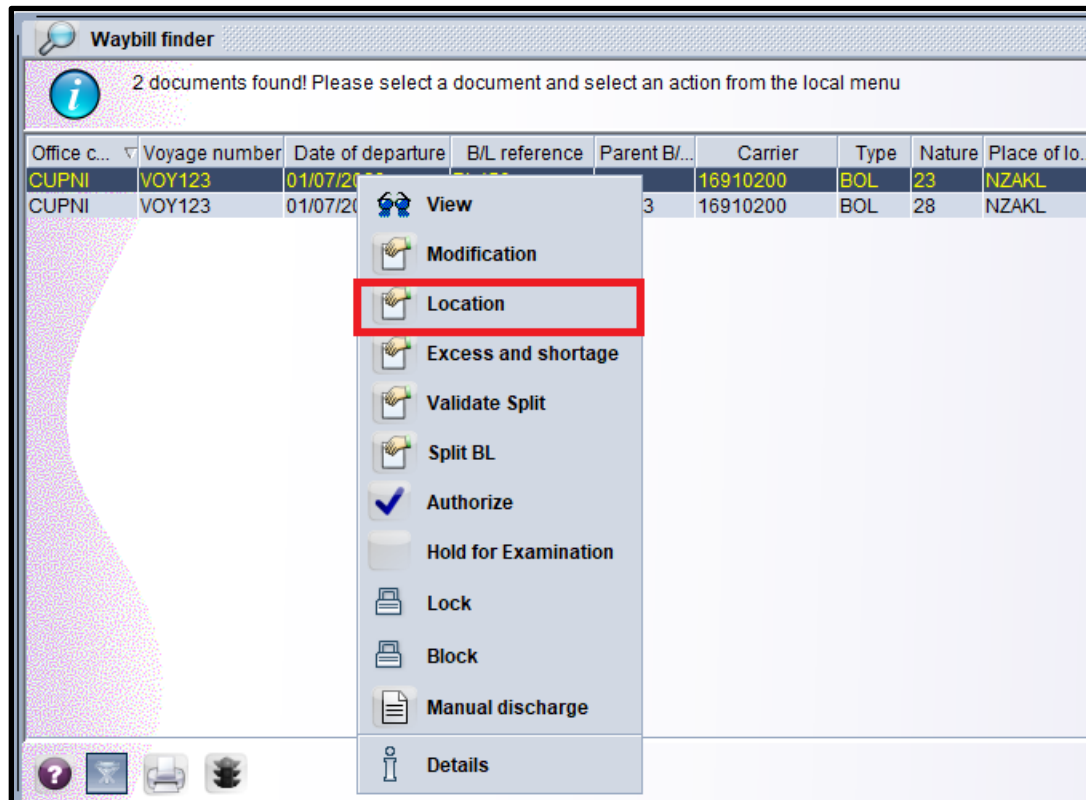

Otherwise, an error message will be displayed detailing the reason for the failure.

10. Location of goods

This operation is used to indicate or modify the place where the goods are stored while waiting for clearance.

You can access this operation by right-clicking the waybill and choosing the “Location” operation.

The waybill form will display as follows

11. Delete a waybill

If the waybill is stored (Status stored) in the system, it can be deleted at any time. Right-click on the waybill and choose the “Direct Delete” option.

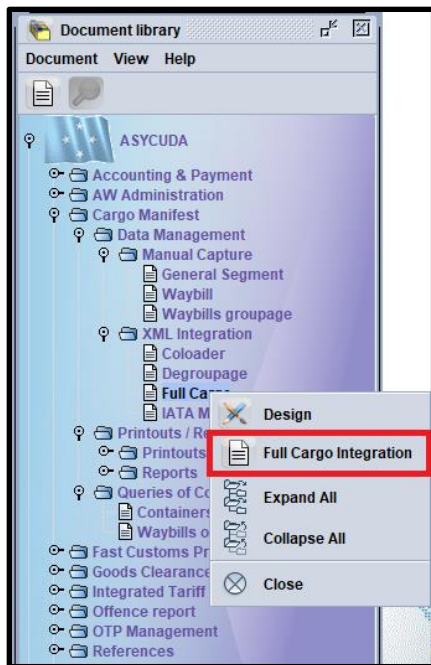

This operation is irreversible. The system will display a question message to confirm the deletion.

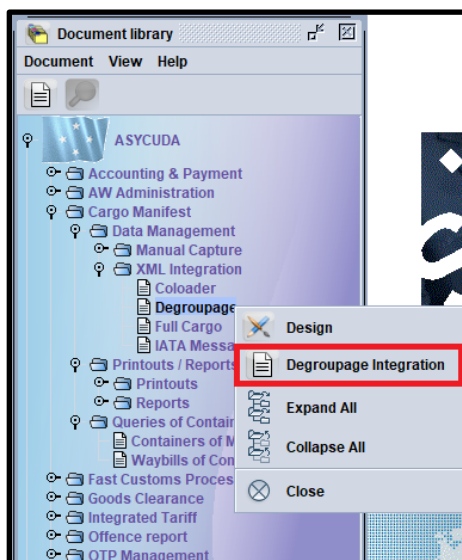

The user will confirm by clicking on the  icon.

VI. XML INTEGRATION

ASYCUDAWorld allows the use of XML files generated from shipping lines' systems. The shipping agents will use this feature to integrate full cargoes, i.e., the manifest general segment and all the 1st level waybills, by right-clicking on the “Full cargo” e-document and choosing the “Full cargo integration” option:

Or to integrate house waybills (2nd level waybills) by right-clicking on the Degroupage e-document and choose “Degroupage integration” option.

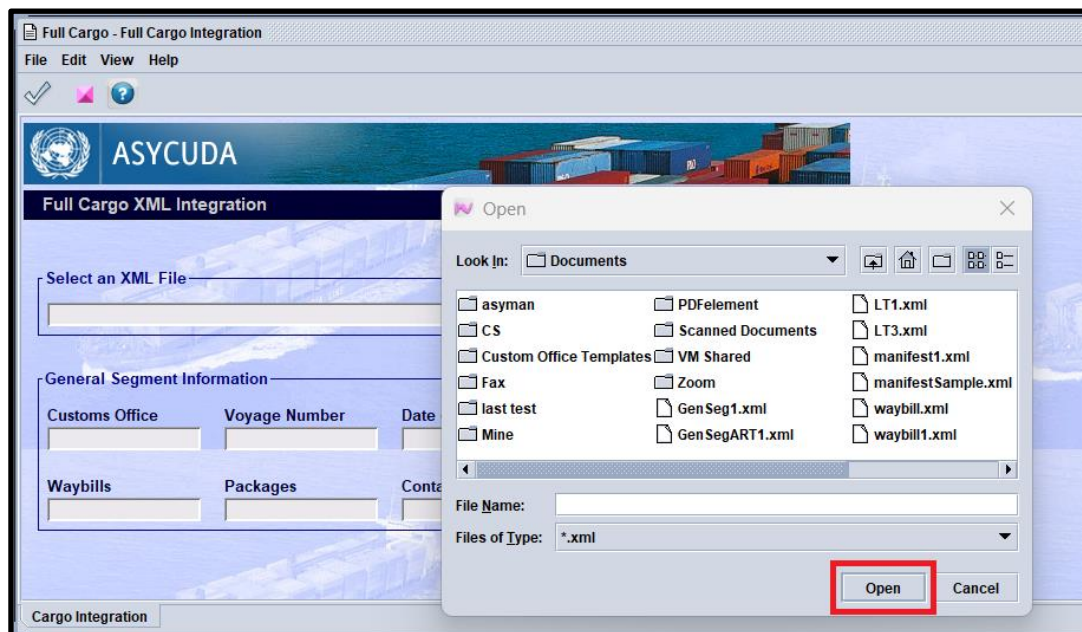

The form below will be displayed:

The screenshot shows the 'Full Cargo - Full Cargo Integration' window. At the top is a menu bar with 'File', 'Edit', 'View', and 'Help'. Below the menu bar are three icons: a checkmark, a red 'X', and a question mark. The main header features the ASYCUDA logo and the title 'Full Cargo XML Integration'. The form has two main sections. The first section, 'Select an XML File', contains a text input field and a magnifying glass icon (highlighted with a red box). The second section, 'General Segment Information', contains two rows of input fields. The first row has 'Customs Office', 'Voyage Number', 'Date of Departure', and 'Total Coloaders'. The second row has 'Waybills', 'Packages', 'Containers', and 'Gross Mass'. At the bottom left, there is a 'Cargo Integration' button.

1. Select XML to integrate

To select the XML file to be integrated, click on the  icon. The window below opens to select the file on the disc.

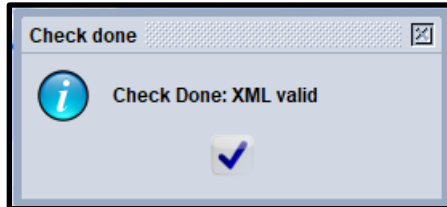

Click on “Open” to select the file.

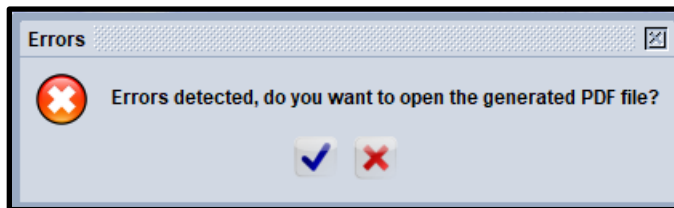

2. Check xml content

Before integration, the user must check if the file is compliant with ASYCUDAWorld manifest standards.

He will click on the  icon. If the file is good, the following message will be displayed.

Otherwise, an error message will be displayed. And a PDF file containing the details will be generated.

Click on the  icon to see the PDF file.

3. Save and store

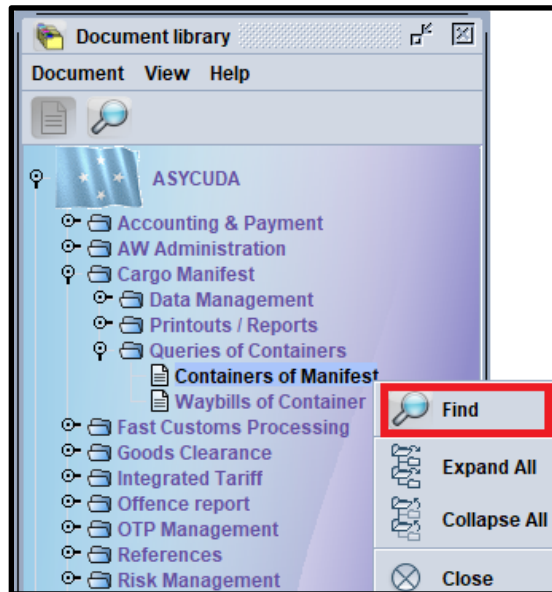

Only valid XML will be integrated into the system. Click on the  icon to save the file.

VIII. CONTAINER MANAGEMENT

There are two ways to find a container.

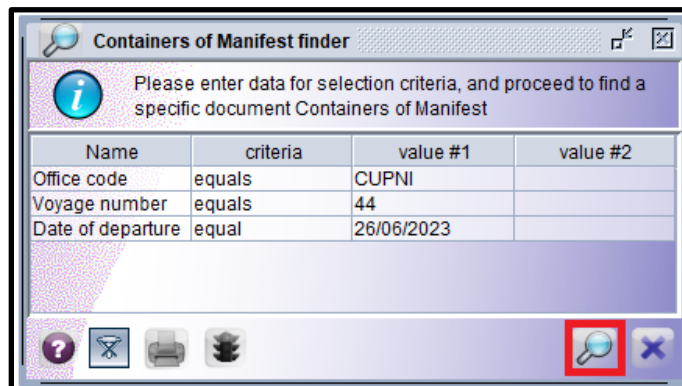

1. Find containers associated to a particular waybill

Right-click on the “Container of Manifest” e-document.

Then choose the “Find” option.

The finder will open and provide the search criteria.

Click on the  icon to search. The list of containers matching the criteria will be displayed.
